Electrovert Reflow Technology Wins New Product Award

FRANKLIN, MASS – April 16, 2008 – Speedline Technologies has received the New Product Introduction award from Circuits Assembly magazine for Electrovert's Intelligent Flux Control™ with RunMax™ Technology. Presented in the reflow soldering category, the award was announced March 31st at the IPC APEX® trade event in Las Vegas.

The IFC system addresses collection and management of flux volatiles within the reflow oven in a manner that does not require interruption of production for maintenance. Multiple collection boxes located strategically in the oven feature 2-stage filtration with an easily-removed heat exchanger and filter cartridge. Machine software monitors and controls flux collection and the system's self-clean function.

According to Greg Calvo, Electrovert reflow product manager, "Flux management systems typically require downtime at intervals that conflict with production. Failure to conduct required maintenance results in altered airflow characteristics within the oven and diminished reflow performance. The innovative design of the IFC with RunMax Technology provides an elegant solution to the problem and enhances flux collection efficiency. The flux collection units require minimal attention, and maintenance can be performed while the oven is in operation, so costly downtime is virtually eliminated."

About Speedline Technologies

Speedline Technologies is the global leader in process knowledge, services and manufacture of capital equipment used in the printed circuit board assembly and semiconductor industries.

Based in Franklin, Massachusetts, USA, the company markets five best-in-class brands: Accel

microelectronics cleaning equipment; Camalot dispensing systems; Electrovert wave soldering, reflow soldering and cleaning equipment; MPM stencil and screen printing systems; and Protect global services, support and training solutions.

For more information about Speedline Technologies visit www.speedlinetech.com or contact Speedline at:
